

Run of Show — two one-hour sessions

Minute-by-minute plan, demo scripts, contingency cuts, and the prep checklist.

Session 1 — Prompts (60 min · slides 1-36)

Clock	Slides	Segment	Presenter notes
0:00	1-2	Welcome + the map	The thesis in one breath: two modes, one craft. Hold up the handout pack at the take-home card — everything shown today is theirs to keep.
0:03	3-6	Part 1 · history	Four eras fast (winters = earned skepticism); linger on the adoption tension stat: everyone chats, few industrialize.
0:10	7-12	Part 1 · concepts	Anchor three analogies hard: tokens = bricks, context = desk, RAG = open-book exam. The rest supports them.
0:19	13	Rep 1 · spot the missing elements	3 min hard cap. Every gap the room names is an element they'll meet in Part 3.
0:22	14-20	Part 2 · landscape	One line per vendor card, two rows of the matrix, then the evergreen habit: the private test set. Eight minutes — keep moving.
0:30	21	Rep 2 · private test set	SKIP BY DEFAULT — run only if ahead of schedule; the habit is already on slide 20.
0:31	22-25	Part 3 · anatomy + elements	The convergence table proves it's not our opinion. Read two weak→strong pairs aloud — contrast teaches.
0:39	26	The taxonomy handout · your field map	Hold the printed reference up; walk the element→attribute→option tree once; land the numbers band. "You don't study it — you look things up in it." Compressible to 30 seconds if behind.
0:41	27-29	Part 3 · techniques + evidence + 2026 update	Slow down on sycophancy: "never reveal your preference" changes behavior today.
0:47	30-31	Iteration habit + Rep 3	Draft→inspect→refine→standardize, then the rebuild-one-line rep (3 min).
0:51	32-34	Part 4 · G2 anatomy + Demo 1 · blind critique	The side-by-side silence moment is the punchline — let them read both answers.
0:56	35-36	Demo 2 · dashboard + handout pack	If generation is slow, open the pre-built file and narrate the prompt (the backup band is on the slide). Close: "the other six templates work the same way."

Session 2 — Agents (60 min · slides 37-57)

Clock	Slides	Segment	Presenter notes
0:00	37	Recap + homework check	Ask who ran the blind critique — one volunteer story beats any recap. 2 min, no more.
0:03	38-39	Part 5 · what an agent is	The loop + building blocks; agents adapt where scripts break.
0:09	40-41	The distinction + inheritance map	THE core content. Read two inheritance rows aloud (Task→mission, Stop→gates); the twelve blocks become inevitable.
0:18	42-43	Mission brief + worked example	Pick three blocks only: checks, gates, reporting. The gates story: errors caught at ascending cost.
0:28	44-45	Guardrails + standing memory	Reversible→act, irreversible→ask. Reuse-by-diff is the economics slide — briefs are investments.
0:36	46	Rep 5 · write one gate	Where the gate feels hard to write, the process was fuzzy — say it out loud.
0:40	47-50	Part 6 · managing prompts	The ladder + the promotion trigger ("explained it twice? package it"), storage map fast, governance card slowly.
0:49	51	Rep 6 · pick your rung	PROTECTED — never cut. A named prompt with a home and a version is the behavior change.

Clock	Slides	Segment	Presenter notes
0:53	52-57	Close	Ten things (let them photograph it), exercises as homework, glossary/sources by pointer, the closing line.

Demo scripts

Demo 1 · Blind critique (6-8 min)

Prep: a one-page fictional plan with 2-3 planted weaknesses (an unpriced assumption, a missing owner, an optimistic timeline), saved as plain text. Live: (1) fresh chat → paste as “a colleague’s draft” → run the G3 critique preset from the Template Creator. (2) second fresh chat → “I wrote this — what do you think?” with the same draft. (3) Put both answers side by side; 20 seconds of silent reading; then ask the room what changed. Land the number: models affirm users ~49% more than humans — blinding is the fix available today.

Demo 2 · Dashboard from a paste (6-8 min)

Prep: a generic 25-row table (period, category, count) AND a pre-built copy of the finished dashboard file as backup. Live: (1) paste the table → run the G6 preset (single file, offline, data embedded, formulas visible). (2) While it generates, narrate the spec lines that make it trustworthy. (3) Download, double-click, filter, sort. Say the two caveats aloud: it is a snapshot, and share the FILE, not a public link.

Contingency cuts — in order

Running 3 min behind	Skip Rep 2 (already default-skip); walk the era slide in 30 seconds.
Running 6 min behind	Matrix slide becomes “screenshot this” (15 seconds); cut the leaderboards slide to its callout; taxonomy slide becomes one sentence + hold up the handout (30 seconds) — never skip it outright, it introduces the pack.
Running 10 min behind	Demo 2 → open the pre-built file only (2 min); handout-pack pointer becomes one sentence.
Session 2 behind	Compress guardrails to the reversibility rule + injection sentence; NEVER cut Rep 6 or the governance card.

Prep checklist (day before)

- ☐ Demo draft (fictional plan) and demo data table staged in a text file; G3 and G6 presets tested end-to-end in the room’s actual AI tool.
- ☐ Pre-built dashboard file on the desktop as Demo 2 backup.
- ☐ Template Creator HTML opens offline on the presentation machine.
- ☐ Handout pack ready: cheat sheet, ELEMENTS guide, Taxonomy Reference (printed for the room or linked — it gets its own slide in Part 3 now, so have it in hand), Template Creator + Configurator files.
- ☐ Timer visible to presenter; reps are 3 minutes by the clock, not by feel.
- ☐ Session 2 booked within a week of Session 1 — homework (blind critique) decays fast.
