

Martin's Pork Products, Inc.

Hog slaughterhouse and pork processor · 6657 King Street, Falcon, North Carolina 28342

USDA Establishment M6720 (Talmadge-Aiken TA-6720) · NC SOSID 0567832

Report date: August 4, 2026 · Compiled from ~40 public sources by an 11-agent research sweep (660 searches and document pulls)

THE FOUR QUESTIONS — SHORT ANSWERS

- 1. Estimated net profit:** Not publicly disclosed (private company). Derived estimate: on the order of **\$150,000–\$700,000 per year**, central estimate roughly **\$300,000–\$400,000**, from a defensible revenue band of ~\$4–13M and small-packer net margins of ~3–6.5%. Lean hog-cycle years could push this toward break-even. See §6.
- 2. Pigs per day:** USDA data places the plant at **10,000–100,000 hogs per year** (roughly 40–400 per working day); it was above 100,000/year as of 2019, and wastewater volumes suggest today's kill is in the lower half of the bracket — best estimate **on the order of 100–300 hogs per working day**. Physical capacity is ~1,300/day. See §5.
- 3. Where they get their stuff:** No supplier is named in any public record. Structurally, it is an **independent packer buying market hogs from the surrounding NC hog belt** (Cumberland/Sampson/Harnett — the densest hog-farming region on the East Coast); an affiliated farm company, Riverside Farms of NC, Inc., may supply some animals. Permit filings list raw materials simply as “swine, sodium.” See §7.
- 4. What it is:** The swine-only, federally inspected slaughter-and-processing plant that survives from the Martin family meat business (Godwin/Falcon, NC, since ~1954). Incorporated October 20, 2000; run by president Beth (Draughon) Holmes and treasurer Steven Holmes; ~2 dozen to a few dozen employees; the flagship business of the tiny town of Falcon. See §§2–4, 8–10.

Scope and method. This report profiles Martin's Pork Products, Inc. of Falcon, NC using only public sources: USDA FSIS inspection and demographic datasets, NCDA&CS plant directories, NC Secretary of State records (via mirror), Cumberland County property records, NC DEQ wastewater permit files, FSIS enforcement and FOIA logs, EPA/OSHA/court databases, commercial data brokers, news archives, and the company's own web presence. Every material claim is tied to a numbered source in Appendix A. Confidence levels are flagged where evidence is thin, and §11 lists what could not be verified.

Important caveat. This is a small private company. It publishes no financial statements, and the only revenue figures that exist are commercial data-broker models that disagree with each other by an order of magnitude. All profit figures in this report are therefore **derived estimates**, built from federal size classifications, county property records, wastewater volumes, and industry margin benchmarks — not from any actual books.

1 · Executive summary

Martin's Pork Products, Inc. is a hog-only slaughterhouse and pork processor at 6657 King Street in Falcon, North Carolina, a town of a few hundred people in northern Cumberland County. It operates under full federal inspection as USDA establishment M6720, administered through the Talmadge-Aiken cooperative program (TA-6720), in which North Carolina state inspectors deliver USDA inspection on-site [2][3][4]. It is one of only six businesses on the Town of Falcon's official directory and is almost certainly the town's largest employer [33].

The company is the surviving pork arm of a venerable local meat dynasty. The Martin family — W.C. “Cap” Martin and his son Carlton Cleveland Martin (1935–2015) — founded Martin's Abattoir & Wholesale Meats in nearby Godwin around 1954; it grew into one of North Carolina's largest privately owned companies before closing its beef operation in September 2013 (~180 jobs) after drought-driven cattle prices made the model uneconomic [28][30][31]. The old abattoir site was sold and now hosts a \$44.8M Smithfield-owned sow-sausage plant — a separate business that outsiders frequently confuse with Martin's [29]. The pork company profiled here was incorporated separately on October 20, 2000, and is led by president Beth (Draughon) Holmes and treasurer Steven Holmes; the Holmes–Martin business partnership is documented through a co-located affiliate, Riverside Farms of NC, Inc., whose officers include Beth Holmes alongside Carlton Martin and W.C. Martin Jr. [9][11].

On the user's headline questions: the plant kills only market swine, at an officially recorded volume of 10,000–100,000 head per year (most recent federal data), down a bracket from the 100,000+ head recorded in 2019 [5][6]. Its estimated physical capacity was 1,300 head/day — ranked #27 among all U.S. pork plants in 2016–17 — but actual throughput today is far below that; wastewater discharge volumes (which have declined steadily since 2011) point to roughly 100–300 hogs per working day [7][8]. Revenue is most defensibly placed at ~\$4–13M per year, employees at roughly 15–40, and derived net profit in the low-to-mid six figures — a real but unremarkable margin business, exactly as the small-processor literature predicts [13–19]. Its compliance record is essentially clean: one 2020 FSIS enforcement notice, deferred and resolved; no recalls, no OSHA record, no lawsuits, no environmental violations [20][22][23][24].

Its public profile is strikingly small for its size: a placeholder website unchanged since the 1990s, a Facebook page with ~300 followers used mostly for weather closures and holiday order deadlines, exactly two online reviews (both glowing — “if you need a hog this the place to go”), and zero press coverage. It sells wholesale pork and whole hogs by phone, order-ahead for pickup, to a standing local customer base — a word-of-mouth business in the heart of eastern North Carolina's whole-hog barbecue country [1][25][35].

2 · Company at a glance

Attribute	Detail	Source
Legal name	Martin's Pork Products, Inc. (NC domestic business corporation)	[1][9]
Incorporated	October 20, 2000 · NC SOSID 0567832 · status current-active	[9]
Plant address	6657 King Street (PO Box 56), Falcon, NC 28342 · Cumberland County	[1][2]
Phone / fax	(910) 980-1501 / (910) 892-1418 · web: martinspork.com (placeholder page)	[1]
Officers	Beth Holmes, President (registered agent) · Steven Holmes, Treasurer	[9]
Inspection	USDA Est. M6720; Talmadge-Aiken plant TA-6720 (federal inspection via NC state personnel); current grant Mar 25, 2022 (a re-grant — the plant long predates it)	[2][3][5]

Attribute	Detail	Source
Species / class	Swine only — market hogs (no sows, boars, or roasters flagged)	[3][5]
Slaughter volume	FSIS category 3: 10,000–<100,000 head/360 days (2019 extract: category 4, ≥100,000)	[5][6]
Processing volume	FSIS category 4: 1M–<10M lbs/month · raw-intact pork only · retail exemption	[5]
Facility	12.45 acres; 12,267 sq ft plant (1974, remodeled 1997) + 5,259 sq ft warehouse (2009); two on-site swine holding houses; assessed \$828,130	[12]
Employees	Best estimate ~15–40 (brokers claim 75 or 5–9; FSIS “Small” class = 10–499)	[5][13][15]
Revenue (est.)	~\$4–13M/yr (broker models: \$12.67M D&B;/Manta; \$4.6M AllBiz; \$1–5M ZoomInfo)	[13–16]
Net profit (derived)	~\$150K–\$700K/yr; central ~\$300–400K — see §6	[§6]
Wastewater	Permitted industrial user (SIU #6) of Fayetteville PWC sewer; ~22,900 gal/day (2022), down from ~32,700 (2011)	[8]
Memberships	NC Meat Processors Association (processor member; contact Beth Holmes)	[26]
Retail outlet	Reported second location, 8761 Fayetteville Hwy, Godwin, NC — partially corroborated; directory data contaminated	[35]

3 · Identity, ownership, and the Martin family connection

3.1 · Corporate identity

Martin's Pork Products, Inc. is a North Carolina domestic business corporation, SOSID 0567832, formed October 20, 2000 and currently active [9]. Commercial directories consistently echo the 2000 founding (“26 years in business”) [13][35]. The corporation owns its plant outright: Cumberland County parcel REID 1502236762000 (12.45 industrial-classed acres at 6657 King St) is deeded to “Martins Pork Products Inc” (deed recorded April 10, 2008) [12]. Note that the plant itself is decades older than the corporation — the main building dates to 1974 — and the 2022 FSIS grant date is a routine re-grant, not an opening date: the establishment number 6720 appears in state directories back to at least 2018, and FSIS records show a prior grant edit in 2011 [5][12].

3.2 · Officers and ownership

The registered officers are **Beth Holmes, President** (also registered agent) and **Steven Holmes, Treasurer** — a married couple from Godwin, NC [9][36]. Beth Holmes is the company's public face everywhere it appears: LinkedIn (“President”), the NC Meat Processors Association member roll (“Beth Holmes, beth@martinspork.com”), and even the two Facebook reviews (“just give them a call, ask for Beth, super owner and person”) [25][26]. Broker records flag the business as women-owned [13].

3.3 · The Martin family link — confirmed in business, unproven in blood

Whether the Falcon pork plant is “still the Martins” was the single most persistent open question in this research, and it resolved in an interesting way. A third co-located company, **Riverside Farms of NC, Inc.** (registered at the same 6657 King Street / PO Box 56 address), lists Beth Holmes as President together with **Carlton Martin** and **W.C. Martin** as Vice Presidents — a documented Holmes–Martin partnership at the same campus [11]. Carlton Cleveland Martin (1935–2015) was the abattoir's founder; W.C. Martin Jr. is his brother [30]. However, Beth Holmes is **not** a Martin by maiden name — public records give her maiden name as Draughon, and Carlton Martin's obituary lists his only daughter as Jennifer M. Matthews [30][36]. The fair characterization: **a Martin-family-affiliated enterprise now operated by the Holmes couple**; any kinship (in-law or otherwise) is unproven.

3.4 · The facility

County records describe a working small slaughterhouse, not a modern industrial site: a 12,267 sq ft one-story concrete-block processing building (built 1974, remodeled 1997, no sprinkler), a 5,259 sq ft steel warehouse added in 2009, and — the tell — two dedicated **swine holding houses** (40×80 ft and 120×41 ft) for live hogs awaiting slaughter. Total assessed value: \$828,130 [12]. Posted hours are Monday–Friday 8am–5pm [35]. The plant sits one block off I-95 exit 65, in the middle of its hog supply.

4 · Regulatory and inspection status

The plant carries **full federal (USDA) inspection** — its pork can be sold across state lines — delivered through the Talmadge-Aiken cooperative program, in which NCDA&CS state inspectors perform FSIS inspection (circuit “80NC”) [3][4][5][6]. The July 24, 2026 NCDA&CS plant directory lists it as TA-6720, activities Slaughter + Processing, species C (swine only) [3]. FSIS classifies it as a “Small” establishment (HACCP size class: 10–499 employees) [2][5]. Its slaughter inspection system is the traditional head-detached method, and its processing is limited to raw-intact pork — no cooked, cured, or ready-to-eat production is flagged in the federal demographic record [5].

Two regulatory footnotes add color. In April 2020 an outside requester FOIA'd FSIS for the plant's communications about adopting the **New Swine Inspection System** (NSIS — the line-speed/inspection modernization rule), indicating Martin's had expressed intent to convert [21]. And notably, the plant is **absent** from both of North Carolina's "processors that slaughter for farmers" directories — strong evidence it is not a custom/fee-for-service butcher but runs its own production for its own account [27].

5 · How many pigs a day?

No public source states a head count directly — the company publishes nothing, and FSIS's establishment dataset is bot-blocked at the front door. The answer below was assembled from a mirrored copy of FSIS's official Establishment Demographic Data, an earlier FSIS extract preserved in an EPA rulemaking docket, a National Pork Board capacity table, and the plant's own wastewater filings — four independent lines of evidence that triangulate well:

Evidence	Vintage	Implied throughput
FSIS Slaughter Volume Category 3 = 10,000–<100,000 head per 360 days (official, establishment M6720)	current (≈mid-2025 extract)	≈28–278/calendar day; ≈40–400 per 5-day working day
FSIS Slaughter Volume Category 4 = ≥100,000 head/yr (same dataset, earlier extract)	Oct 2019	≥≈385 per working day — the plant ran above 100k/yr pre-2020
Process wastewater: 32,700 gal/day (2011) → 26,333 (2016) → 22,887 (2022), at a typical 150–500 gal per hog for kill + cut	2011–2022	≈45–150/day; volumes declining steadily
National Pork Board / EMI Analytics estimated daily slaughter capacity: 1,300 head/day , ranked #27 among U.S. pork plants	Fall 2016 & 2017	nameplate capacity — the plant runs well below it

BEST ESTIMATE — SLAUGHTER VOLUME

Officially: **somewhere between 10,000 and 100,000 hogs per year**. Reconciling the bracket with the declining wastewater volumes and the 2019 category-4 reading, the most defensible current figure is **on the order of 100–300 hogs per working day** (roughly 25,000–75,000 per year) — down from 400+/day before 2020, and a fraction of the plant's ~1,300/day physical capacity. For scale: Smithfield's Tar Heel plant, 45 minutes south, kills ~30,000/day.

One inconsistency worth flagging: the same federal record assigns a **Processed Volume Category 4** (1–10 million lbs of product/month), which would imply far more meat than a 100–300/day kill produces (≈300 hogs/day yields only ~1M lbs/month of carcass weight). Either the category is stale, sits at its bracket floor, or the plant also cuts pork purchased from other packers — consistent with its "wholesale meats" directory identity [5][35].

6 · Financial picture and estimated net profit

6.1 · What the revenue estimates actually say

No audited figures exist. The commercial data-broker estimates conflict by an order of magnitude — and, critically, most of them descend from the same Dun & Bradstreet/DUNS data origin, so they are **not independent observations**:

Source	Annual revenue	Employees	Assessment
Dun & Bradstreet (via snippets)	≈\$12.67M	75	Modeled figure; page bot-blocked; origin of most other records
Manta	\$12,673,315	≈75	Mirrors the D&B; record — pseudo-corroboration, not confirmation
AllBiz	≈\$4.6M	75	Mixed record (D&B-derived; different vintage)
ZoomInfo / Datanyze	\$1–5M	5–9	Conflicting broker record; headcount contradicted by FSIS class
Buzzfile (Godwin store record)	\$76K	4	Corrupted record (miscoded as “Motion Picture Distribution”); ignore
PrivCo	“\$380M”	—	Confirmed placeholder/demo data shown to non-subscribers; must be disregarded
FSIS “Small” size class	≥\$2.5M implied	10–499	Independent federal floor: rules out the low-end records
County property record	—	≈15–40 plausible	17,526 sq ft plant strains a 75-person claim

The reconciliation: FSIS's independent classification (≥10 employees, and “Very Small” would apply below \$2.5M sales) eliminates the 5–9-employee/\$1M records; the modest physical plant, a near-zero hiring footprint (no job postings or employee reviews anywhere), and a single LinkedIn-visible employee make 75 heads look overstated. A ~25–35 person workforce against ~\$8–13M revenue would also normalize revenue-per-employee to a packer-typical \$300–500K (the literal D&B; pairing implies an anomalous \$169K/employee). **Defensible band: ~15–40 employees, ~\$4–13M revenue** [5][12][13–16]. A sanity check from volume: ~40,000–60,000 hogs/yr sold as wholesale pork at \$150–250/head of product value lands at roughly \$6–15M — consistent with the upper half of the band.

6.2 · Margin benchmarks for a plant like this

- IBISWorld puts average U.S. meat-processing industry profit at **≈6.5% of revenue** in 2025 (5.4% in 2020) [17].
- Real small-plant books published by the Niche Meat Processor Assistance Network show net margins of **3.8% (2008) and 0.3% (2009)** for an actual small processor — “meat processing facilities operate on small margins” [18][19].
- NMPAN's model small USDA plant projects 15% return on sales only in an idealized Year 3 fee-for-service scenario — not representative of a commodity kill-and-cut packer and excluded here [19].

6.3 · Derived net-profit estimate

Scenario	Revenue basis	Margin basis	Implied net profit
Low / lean year	\$2.5–4.6M (FSIS floor to AllBiz)	1–3% (NMPAN actuals)	≈\$25K–\$140K
Central	\$8–12.7M (upper band, volume-consistent)	3–5%	≈\$240K–\$640K
High / strong year	\$12.7M (D&B;/Manta)	6.5% (IBISWorld 2025)	≈\$825K

BEST ESTIMATE — NET PROFIT

Roughly \$150,000–\$700,000 per year, with a central estimate of about \$300,000–\$400,000. This is a derived figure — revenue band × small-packer margin benchmarks — not a reported number. Hog-price cycles cut both ways for a packer (cheap hogs widen margins; expensive hogs compress them): the family's own beef abattoir was killed by exactly that dynamic in 2013, so near-break-even years should be considered part of the normal range.

7 · Where do they get their stuff?

No public record names a single hog supplier — no farm, auction, buying station, or integrator contract — despite roughly twenty targeted searches for farms or vendors citing Martin's as their processor. What the record does establish is the **structure** of the supply chain:

- **It buys hogs; it is not a custom butcher.** The plant is absent from both NC directories of processors that slaughter for farmers, and its federal record carries no custom-exempt designation — it runs its own production for its own account [3][27].
- **Market hogs only.** The FSIS demographic record flags market-swine slaughter exclusively — no sows, boars, or roasting pigs — i.e., standard finished butcher hogs (~280 lb) of the kind produced across eastern NC [5].
- **It sits in the middle of America's densest hog country.** Cumberland, Sampson, Harnett, Duplin, and Johnston counties surround the plant; Sampson and Duplin alone hold ~4 million hogs. A small independent packer here has ample access to contract growers' cull sales, independent finishers, and spot-market hogs [contextual].
- **The family model was always “buy on the open market.”** The Martins' beef abattoir closed in 2013 explicitly because it could no longer buy affordable cattle — they were livestock buyers, not raisers [28].
- **A farm affiliate exists.** Riverside Farms of NC, Inc. — same address, same principals (Holmes + two Martins) — is plausibly a hog-raising arm supplying some animals, but no record states what it produces [11].
- **Other inputs:** the plant's wastewater filing lists raw materials as, verbatim, “**Swine, sodium**” — hogs and salt. Consistent with raw-intact-only processing (no seasoning/casing supply chain to speak of); water from municipal/well supply; wastewater to the Fayetteville PWC sewer [5][8].

Bottom line: an independent packer buying finished market hogs from the surrounding North Carolina hog belt — likely a mix of local independent growers and spot purchases, possibly supplemented by its own affiliated farm — rather than raising its own herd or slaughtering on contract for farmers. This is an evidence-based inference, clearly labeled as such: no supplier list exists in the public record.

8 · Products, customers, and how they sell

Directories uniformly categorize the Falcon plant as **wholesale meat / meat packers**; its Facebook page is categorized “Meat Wholesaler” (price range “\$\$”) [25][35]. The federal record limits production to **raw-intact pork** — fresh cuts and carcasses, not cooked or cured goods — with a retail exemption that lets it sell from the plant [5]. Direct evidence of the sales model comes from its own Facebook posts:

- **Order-ahead, pickup at the plant:** “If you'd like to have any of our products for your holiday weekend, please place your order by Tuesday, June 30, 2026, for pickup on Thursday, July 2” — a standing weekday order-and-pickup cadence, with holiday spikes (July 4th cookout season) [25].
- **Whole hogs for individuals:** “Great place and good people and if need a hog this the place to go” — whole-hog sales into eastern NC pig-pickin' culture are confirmed customer-side [25].
- **Word-of-mouth service:** “Wonderful — just give them a call, ask for Beth, super owner and person” [25].
- A reported family-affiliated WOSB listing (under the Martin's Abattoir name) offers pork barbecue and child-nutrition barbecue to institutional buyers, and primal-cut loins, hams, and shoulders — suggesting school/government food-service channels somewhere in the family cluster [37].

No named wholesale customers (restaurants, BBQ houses, grocers) appear anywhere, no price list is published, and the marketing footprint is essentially zero — a placeholder website and ~300 Facebook followers. For a business plausibly moving eight figures of pork, that is itself the most telling fact: its customer relationships are long-standing, local, and entirely offline.

9 · Reputation, compliance, and environmental record

Domain	Finding	Source
Food safety (FSIS)	One Notice of Intended Enforcement, July 31, 2020, deferral granted (basis unstated); absent from all later enforcement reports — resolved. No recalls, no humane-handling letters on the current public log.	[20]
Worker safety (OSHA)	No inspections or citations on record for the Falcon entity in the searchable window. (The old Godwin abattoir had a 7-inspection/46-violation history in its era.)	[23][37]
Environment (EPA/DEQ)	No violations. Holds no discharge permit of its own — it is a permitted, monitored industrial user (SIU #6) of the Fayetteville PWC sewer via the NORCRESS regional system (built ~2007–08); no upsets or pass-through attributed to it in PWC's filings. Only federal footprint: a long-inactive on-site well-water system (closed 2003).	[8][22]
Litigation	Zero published opinions or discoverable lawsuits under either family company name.	[24]
Public reviews	Nearly none exist: 2 Facebook recommendations (both positive), zero reviews on Yellow Pages/BBB/Yahoo; Yelp listings exist but are bot-walled; BBB file open since 2010, no complaints displayed, “Not Rated.”	[25][35]
Activist attention	Listed in the Farm Transparency Project's slaughterhouse database — with zero photos, investigations, or campaign materials attached.	[34]
Press	No news article about the Falcon plant has ever been found — in the Fayetteville Observer, Dunn Daily Record, trade press, or anywhere else.	[§11]

Taken together: a quiet, clean operator. The single 2020 enforcement notice is unremarkable for a small slaughter plant (NOIEs are typically sanitation/HACCP paperwork escalations, and the deferral means FSIS accepted the plant's corrective plan).

10 · History: the Martin family meat business

Year	Event
≈1954–55	W.C. “Cap” Martin and son Carlton Martin found Martin’s Abattoir & Wholesale Meats in Godwin, NC — beef slaughter and wholesale; brother W.C. Martin Jr. joins. It grows into one of NC’s largest privately owned firms (~180 employees) [28][30][31].
1974	The processing building at 6657 King St, Falcon — today’s pork plant — is built (remodeled 1997) [12].
2000	Martin’s Pork Products, Inc. incorporated (Oct 20) with Beth and Steven Holmes as officers; the same year, Carlton Martin is named Methodist University Entrepreneur of the Year [9][31].
2007–08	NORCRESS regional sewer reaches Falcon; the plant becomes a permitted industrial discharger to Fayetteville’s system [8].
2013	Sept: Martin’s Abattoir closes after ~58 years (~180 jobs) — drought-driven cattle prices; operations director Jeffrey Martin says the family will “continue with their other companies.” Dec: Kansas City Sausage Co. (a Smithfield JV) buys the abattoir’s assets plus sister companies Coastal Protein Products/Coastal Protein [28][29].
2014–16	KC Sausage/Smithfield build a \$44.8M, 90,000 sq ft sow-harvest sausage plant on the old 1600 Martin Rd site (700–1,000 sows/day; Smithfield takes full ownership 2017). A frequent source of confusion — that plant is not Martin’s [29].
2015	Carlton Cleveland Martin dies at 79; posthumously awarded the Order of the Long Leaf Pine [30].
2019	FSIS data records the Falcon plant above 100,000 head/yr (volume category 4) [6].
2020	April: FOIA filed over the plant’s intent to adopt the New Swine Inspection System. July: FSIS NOIE, deferred and later resolved [20][21].
2022	Current FSIS grant of inspection issued (Mar 25) — an administrative re-grant [2][5].
2025–26	Current data: volume category 3 (10k–<100k head/yr); active and operating — Facebook posts through July 2026 (“Our phones are back up and running!”) [5][25].

11 · Data quality, contradictions, and what remains unknown

Strong (multiply corroborated, primary-source): identity, address, ownership/officers, inspection status and species, the FSIS volume brackets, the property record, the wastewater volumes, the clean compliance record, and the family history/timeline.

Derived (methodology disclosed, uncertainty wide): pigs-per-day point estimate (\$5) and net profit (\$6). Both rest on official brackets plus conversion assumptions, not on any reported figure.

Known contradictions in the record:

- 75 vs. 5–9 employees and \$12.67M vs. \$1–5M revenue — conflicting vintages of the same data-broker ecosystem; resolved here to ~15–40 / ~\$4–13M using independent federal and county evidence.
- Slaughter category 3 (current) vs. processed-volume category 4 — possibly stale data or purchased-meat processing (\$5).
- The reported Godwin retail outlet (8761 Fayetteville Hwy) is only partially corroborated; its directory records are contaminated with data from the old abattoir/KC Sausage and a miscoded Buzzfile entry — treated as unverified.
- PrivCo's displayed financials for the company are confirmed placeholder/demo data and were excluded entirely.

Could not be verified despite exhaustive attempts:

- An actual (non-derived) profit or revenue figure — none exists publicly.
- An exact head-per-day figure — the two documents that would state it (FSIS's raw front-door dataset; the plant's PWC-issued industrial user permit) are bot-blocked and un-published respectively. A public-records request to Fayetteville PWC's pretreatment program would likely yield the permit's production basis.
- Named hog suppliers or wholesale customers — zero public attestations found.
- Beth Holmes's family relationship (if any) to the Martins — disconfirmed as Carlton's daughter; otherwise unknown.
- The NC Secretary of State portal, FSIS website, Wayback Machine, D&B;, ZoomInfo, Yelp, LinkedIn, and several news archives all block automated access — affected facts were recovered via official mirrors, government dockets, and search snippets, and are confidence-flagged accordingly.

Method note. This report was compiled August 4, 2026 by an 11-agent automated research sweep (six parallel angles, an adversarial completeness review, and four targeted follow-ups; ~660 web searches and document retrievals). Facts were cross-checked across independent sources wherever possible; single-source claims are attributed as such. Nothing herein derives from non-public information.
